Your Drive Recycler is securely operated by GJ Core Management. This allows the Recycler Kit to always have the most up-to-date GJ drive image, and thus all drives entered will be wiped and re-imaged with our latest best practices, features, and updates.

You can maintain an inventory of spare production and backup drives in your office, waiting to be added to the Recycler Kit.

1. NEW PROJECT = CLEAN START
When a new project begins, your team simply grabs a ready-to-go OEM Laptop Kit and External Backup Drive (the "Laptop Kit"), both pre-loaded with clean drives featuring the latest and greatest GJ images.

Your GJ Kit

2. TRANSIT & PRODUCTION
Your team packs the Laptop Kit in a secure hardcase (included) and travels to the client's office. They perform requested tasks for the duration of the project on-site, usually a few weeks.

QUESTIONS/ISSUES?
Emergency issues while at the client site? GJ Support is available 24/7/365.

5. REPORTING & CERTIFICATION
If you finish your project with used drives and refresh them, the Drive Recycler service will provide a report certifying that all drive information has been erased. This provides documented peace of mind to your clients that all their sensitive data has been wiped from the drives.

4. WIPE/EXCHANGE DRIVES
- If you return with used drives, simply remove them from the Laptop Kit and Backup Drive and place them in the Drive Recycler for re-imaging. Of course, first remove the ready drives waiting in the Recycler and install in the Laptop/Backup.
- If you leave drives with the client, grab fresh drive(s) from the Recycler and add to your Laptop Kit / Backup. Don't forget to refresh your Recycler Drive Kit with 4 additional drives to be imaged.

3. PROJECT COMPLETION
To close out the project, your team can leave data-filled drives with the client or can bring them back to the office for recycling and use on subsequent cases. Each laptop holds 3 drives plus 1 drive in the backup device.
